SUMMARY

Computer Science Engineer (2027) experienced in building scalable software, automation pipelines, and ML applications. Proficient in Python, AWS, and REST APIs with a focus on optimizing processes through automated, data-driven solutions.

EDUCATION

Punjab Engineering College (Deemed to be University), Chandigarh

Aug 2023 – May 2027

B.Tech. Computer Science and Engineering | GPA: 9.03 / 10.0

Relevant Coursework: Data Structures & Algorithms, OS, OOP, DBMS, AI, Computer Networks, Machine Learning, Computer Architecture, Design Analysis of Algorithms, SQL

EXPERIENCE

Cvent

Gurugram, India

Automation Engineer Intern

Jan 2026 – July 2026

- Developed Python scripts to automate enterprise workflows, enhancing operational efficiency.
- Built scalable REST API integrations for real-time data exchange across enterprise systems.
- Maintained AWS Lambda and serverless solutions for low-latency production workloads.
- Engineered self-service tools to reduce routine task dependency and accelerate throughput.
- Collaborated on code reviews and runbook documentation following industry best practices.

Amazon

Remote

ML Summer School 2025 – Trainee (Competitive, Nationwide Selection)

Jul 2025 – Aug 2025

- Selected from thousands of applicants nationwide for Amazon's highly competitive Machine Learning Summer School, demonstrating strong foundational ML and problem-solving skills.
- Completed an intensive, industry-grade curriculum spanning Supervised & Unsupervised Learning, Deep Neural Networks, Generative AI & LLMs, Dimensionality Reduction, Reinforcement Learning, and Causal Inference.
- Engaged with Amazon Scientists in live Q&A sessions, translating research-level ML concepts into practical engineering applications — directly strengthening readiness for data-driven roles in fast-paced environments.

PROJECTS

Market Anomaly Detection Engine ([github](#))

May 2026 – Present

Python · FastAPI · scikit-learn · TensorFlow · yfinance · React (Vite) · TypeScript · Railway

- Built a real-time financial market surveillance system monitoring 10+ equity tickers using an ensemble of Isolation Forest, LSTM-Autoencoder, and Z-score models with majority-vote consensus, deployed on AWS-compatible serverless infrastructure.
- Achieved ~94% detection precision on flash-crash scenarios (2010, COVID-19) with sub-200ms latency, reducing anomaly identification time by ~85% vs. manual monitoring.

AWS Price List Visualizer ([link](#) - [github](#))

May 2025 – Present

Python · AWS Price List API · REST APIs · React (Vite) · TypeScript

- Built a full-stack system to automate extraction and real-time visualization of large AWS pricing datasets across 200+ services.
- Reduced analysis time by ~87% (from 15 to under 2 minutes), delivering globally accessible cost insights.

Chat with PDF AI (RAG Pipeline) ([link](#) - [github](#))

Mar 2025 – Present

Python · LangChain · Gemini API · FAISS / Chroma · Streamlit

- Built a RAG pipeline with document chunking and vector databases for context-aware querying of 100+ PDFs.
- Cut search time by ~80% (5 minutes to ~1 minute), converting complex data into actionable solutions.

TECHNICAL SKILLS

- **Languages:** Python, C++, C, Rust, JS, TS, SQL
- **Cloud:** AWS (Lambda, S3, Price List API), Serverless, REST APIs, Git
- **AI/ML:** Deep Learning, GenAI, LLMs, NLP, TensorFlow, LangChain, RAG
- **Tools:** React (Vite), Node.js, Streamlit, Vertex AI, Gemini, MySQL, FAISS/Chroma, Typescript, HTML

CERTIFICATIONS & AWARDS

- Deep Learning Specialization (Coursera): [Neural Networks](#), [Tuning](#), [Structuring ML Projects](#), [Convolutional Neural Networks](#)
- Google GenAI Study Jams 2024: 15 Credly Badges: [Credly profile](#)
- Gen AI Academy Certificate: Hack2Skill: [Gen AI Academy Completion](#)

LEADERSHIP & ACTIVITIES

- Board Member, PEC ACM – Organized technical events and workshops for engineering students.
- Sub-Head, Women Empowerment Cell – Directed logistics, coordination, and creative initiatives.
